

## Boom Lift Training Vaughan

Boom Lift Training Vaughan - Elevated work platforms, also called aerial platforms, allow workers to perform jobs at heights that would otherwise be not reachable. There are different kinds of lifts designed for different site applications and conditions. If operated carelessly, elevated work platforms can cause fatality or serious injury. The most common causes of related accidents are falls, electrocution, tip-overs and crushed body parts. Lift operators should be fully trained in procedures to avoid accidents during the operation of lifts.

The Aerial Lift Safety program provides required resources in order to help individuals needing to learn how to operate these devices more effectively. Through the course, participants would be given thorough instruction. Kinds of lift covered comprise scissor, articulating and boom supported aerial lifts. The video presents the correct techniques operators should follow. Instruction focuses on pre-operational inspection, protection against falls, safe driving procedure and stability of the device.

The course addresses equipment reliability and employee safety. All instructional materials are compliant with government, provincial and state agency regulations and requirements. Training methods and course management would be taught. The trainer will likewise know the technical aspects of aerial lift safety.

Both practical training and classroom training are parts of the Aerial Platform/Boom Truck Training course. Both sessions must be successfully completed for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms completely beyond the base of the machine. The theoretical training component is virtually identical for both types. The practical training component could be completed faster if only one kind of machine is used.

### Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to efficiently use elevating work platforms whilst lessening the chances of a costly workplace accident. Trainees will review of applicable rules and company policies, discuss Due Diligence, study Criminal Negligence and consequences to trainers, employers, supervisors and workers. Participants would review machine features, operating procedures, stability, fueling/charging procedures and parking. Site-specific safety issues would be addressed.
